PROFESSIONAL SUMMARY

Senior Full Stack Developer and Technical Lead with 8+ years of experience building enterprise applications for Verizon and Citigroup. Leads React and TypeScript architecture, state management, micro-frontends, and API integrations, with backend experience in Java, Spring Boot, and Node.js. Delivers operational dashboards and enterprise workflows through technical design, reusable components, and cross-team coordination. Uses AI-assisted development tools and brings foundational knowledge of LLMs, retrieval pipelines, and vector databases.

TECHNICAL SKILLS

Frontend: React, JavaScript (ES6+), TypeScript, React Hooks, React Router, Redux Toolkit, Redux Thunk, Angular, NgRx, HTML5, CSS3

Backend and Data: Java, Spring Boot, Node.js, REST APIs, Backend-for-Frontend (BFF), SQL, PL/SQL, Oracle Database, PostgreSQL, Apache Cassandra

Architecture and Delivery: Micro-Frontends, Module Federation, Reusable Components, Git, Vite, Jenkins, GitLab CI/CD

AI Tools and Foundations: GitHub Copilot (Claude and GPT-based models); foundational knowledge of Large Language Models (LLMs), retrieval pipelines, and vector databases

PROFESSIONAL EXPERIENCE

HCLTech | Senior Software Engineer / Technical Lead | Mar 2024 - Present

Client: Verizon

Magna Billing Operations Platform | Jan 2026 - Present

- Built a unified React operations portal backed by Spring Boot REST APIs and Oracle Database for bill-cycle monitoring, SLA tracking, and alerts; consolidated 6 monitoring workflows and 5 regional systems, reducing operational context switching by 65% and manual job-status verification time by 40%.
- Implemented asynchronous Java/Spring Boot services with Quartz Scheduler to execute 65 parallel data-ingestion workflows, increasing background processing throughput by 35%.
- Designed a YAML- and database-driven Action Engine that executes REST and shell triggers on job-state transitions, reducing workflow-rule onboarding from 2 weeks to under 3 hours without application code changes.
- Secured the Magna operations portal and supporting APIs using OAuth 2.0/OpenID Connect (OIDC) authentication and authorization controls for operational workflows.
- Improved reliability of bill-cycle monitoring and data-ingestion workflows through SLA/SLO tracking, actionable alerts, and automated recovery from processing failures.
- Led technical design, cross-team coordination, and CI/CD delivery across microservices and legacy Mainframe/CA 7 Workload Automation systems;

resolved state inconsistencies and remediated dependency vulnerabilities.

- Develop the operations portal within the Magna ecosystem, which includes an existing AI agent application supporting operational workflows.
- Use GitHub Copilot with Claude and GPT-based models to explore code, support development and debugging, and review refactoring and code quality changes.

Ecommerce Gateway Platform | Sep 2025 - Jan 2026

- Architected a React 19 shell with 6 federated micro-frontends using React Router, Vite and Module Federation, enabling independent deployment with shared singleton dependencies.
- Built an 18-component reusable UI kit using React, TypeScript and Verizon VDS, standardizing tables, filters, pagination, forms and action controls across 6 frontend applications.
- Implemented Redux Toolkit state management with runtime reducer injection, persisted domain slices and typed selectors; normalized API responses and handled request cancellation with Axios.
- Automated build, test, lint and preview workflows across 7 Vite workspaces using npm workspaces, TypeScript and Vitest, producing 6 independently previewable remote bundles.

Contract Transparency Platform | Sep 2025 - Jan 2026 | Concurrent project

- Led React/Redux modernization of enterprise workflows supporting 10,000+ annual work orders; established standards for state management, API errors, telemetry and module boundaries.
- Built 150+ reusable design-system components, reducing development time for new features by 40%.

VBG Automation | Jan 2025 - Sep 2025

- Designed modular React workflows with reusable Verizon VDS controls, dynamic forms, grids, and dashboards for enterprise automation.
- Implemented role-based access control (RBAC) for dynamic checklist forms, restricting access to checklists based on user roles within automation workflows.
- Implemented centralized and feature-level state management with Redux, Redux Thunk and Redux Toolkit; integrated REST APIs using Axios and added request tracing through interceptors.
- Built batch approvals, multi-filter views, idle-time form autosave and background campaign-status refresh using React Hooks, Redux and Axios.
- Standardized frontend builds and deployments through a shared GitLab CI pipeline; configured Babel, analyzed bundle size and tuned Node.js build memory.

Vision IoT | Mar 2024 - Jan 2025

- Built React/TypeScript dashboards for real-time IoT device monitoring, event analysis and session management; integrated middleware REST APIs for device events and session lifecycle workflows.

TCS | Web Developer, Full-Stack | Oct 2018 - Mar 2024

Client: Citigroup

- Led migration of a legacy mortgage application from client-side rendering to Angular 13 server-side rendering (SSR), redesigning core workflows and architecture; received the Star of the Sprint Award.
- Built enterprise mortgage applications with Angular, React, TypeScript, Redux/NgRx and Java/Spring REST APIs.
- Achieved 90% unit-test coverage on a mortgage workflow using Jasmine/Karma; performed accessibility and performance audits with Lighthouse, NVDA and axe.
- Integrated legacy mortgage applications with enterprise REST APIs, implementing validation, error handling and pagination.
- Improved performance through lazy loading, optimized change detection and memoization; mitigated cross-site scripting (XSS) risks using Angular security and DOM sanitization.
- Coordinated with 10+ engineering, QA, and product teams and supported CI/CD delivery through Jenkins and RLM.

EDUCATION

Doctor of Business Administration (DBA) | Westcliff University

Business and Data Analytics | Incoming student | Expected start: January 2027

Master of Science in Computer Science | San Francisco Bay University

2016 - 2018 | GPA: 3.8

Bachelor of Engineering in Electronics and Communication Engineering | Vemana Institute of Technology

2011 - 2014

CERTIFICATIONS AND AWARDS

Google Data Analytics Certificate | Google

Microsoft Azure Fundamentals (AZ-900) | Microsoft

Star of the Sprint Award | TCS

Capstone Competition Award | Master’s program
